Ai engineer

I am an engineering student with a strong interest in Artificial Intelligence, Machine Learning, and software development. I enjoy exploring how intelligent systems can automate tasks, improve decision-making, and solve real-world problems.My current focus is on building practical software projects in AI and machine learning, understanding modern development workflows, and developing solutions that combine data, automation, and intelligent systems.I am always open to learning, collaborating, and exploring opportunities in AI, machine learning, and software engineering.

EDUCATION

BACHELORS IN TECHNOLOGY

vignans institute of information technology • 01/2024 - 01/2028

CERTIFICATIONS

Cyber Job Simulation • 03/2026 - 03/2026

Deloitte

GEN AI powered data analytics job simulation • 02/2026 - 02/2026

TATA

Prompt Engineering • 12/2025 - 12/2025

Cognitive Class(IBM SKILLS NETWORK)

PROJECTS

AI based chatbot for disease prediction

Developed a chatbot that predicts diseases based on symptoms entered by users. Implemented machine learning techniques to analyze symptom–disease relationships.

AI Language Translator

Developed a multilingual translation tool using Python, Streamlit, and Deep Translator with text-to-speech functionality for real-time language conversion.

Spam SMS Detection

Developed a machine learning model using TF-IDF and Logistic Regression to classify SMS messages as spam or ham with high accuracy.

Movie Genre Classification

Built an NLP-based machine learning model to predict movie genres from plot descriptions using TF-IDF vectorization and Logistic Regression.

Customer Churn Prediction

Created a predictive analytics model to identify customers likely to leave a service using classification algorithms and data preprocessing techniques.

SKILLS

artificial intelligence, communication, data base management systems, data structures, machine learning, python, SQL
